(2-8 bar admission pressure)

Description

Dear customer

We would like to congratulate you on your new high pressure cleaner with integrated water tank and to thank you for the purchase.

To ease your introduction to the use of the cleaner, we have provided the following pages of explanations, tips and hints, which we ask you to read before using for the first time.

The equipment will assist you professionally in all cleaning tasks, e.g.:

- **facades**
- **flagstones**
- **terraces**
- **vehicles of all types**
- **containers**
- **machines etc.**
- **barrels and containers**
- **channels**

Description

Construction

The KRÄNZLE quadro 800 TST, 1000 TST and 1200 TST high pressure cleaners are mobile machines with hose drum and 20m industrial hose. The KRÄNZLE quadro 1000 TS und 1200 TS - high pressure cleaners are mobile machines without hose drum, however with 10m industrial hose. The schematic principle can be seen from the illustration.

Components

- | | |
|--------------------------------------|---|
| 1 Water inlet connection with filter | 6 Detergent valve |
| 2 Cover for water tank | 7 High pressure hose |
| 3 High pressure pump | 8 Spray gun |
| 4 Press. gauge with glycerin filling | 9 Interchangeable lance with Turbokiller |
| 5 Unloader valve - safety valve | 10 Interchangeable lance with flat jet nozzle and nozzle protection |

Water system

The water must be lead to the high pressure cleaner under pressure (2 – 8 bar admission pressure). A float valve regulates the water inlet. Then, the water is sucked by the high pressure pump from the water tank and supplied to the lance under the set pressure. The high pressure jet is formed by the nozzle at the end of the lance.

Detergent and caring system

The high pressure pump can also suck a detergent/caring agent and mix it with the high pressure jet. The additive is sucked through the pump and brought in with the set pressure.

Insert the detergent hose into the detergent container and open the detergent valve (6).

The detergent discharges with the water at the high pressure nozzle.

**Open the dosing valve, if the chemistry sieve is placed in a liquid. Sucked air leads to destruction of the pump seals!!!
The rules concerning the environment, refuse and ground water protection must be complied with!**

Lance with spray gun

The machine can only be operated when the safety trigger is squeezed.

When the lever is squeezed, the spray gun opens. The liquid is then pumped to the nozzle. The spray pressure increases and quickly reaches the selected operating pressure.

When the trigger is released, the trigger gun closes and any further spraying of liquid from the lance is stopped and the manometer must show 0 bar.

The increase in pressure when the trigger gun is closed causes the unloader valve-safety valve to open. The pump remains switched on and continues to pump liquid through the pump at reduced pressure. When the spray gun is opened, the unloader valve - safety valve closes and the pump resumes spraying from the lance with the selected operating pressure.

The spray gun is a safety device. Repairs should only be performed by qualified persons. Should replacement parts be required, use only components authorized by the manufacturer.

Description

High pressure hose and spraying device

The high pressure hose and spraying device supplied with the machine are made of high grade material. They are also optimized for the machine and marked as required by the appropriate regulations.

Unloader valve - safety valve

The unloader valve - safety valve protects the machine from a build up of excess pressure, and is designed not to permit an excess pressure to be selected for operation. The limit nut on the handle is sealed with a spray coating.

The operating pressure and spray rate can be steplessly adjusted by turning the handle.

Replacements, repairs, new adjustments and sealing should only be performed by qualified persons.

Description

Delayed motor cut-out

Frequent, work-necessitated switching on and off of motors on machines of this size puts a heavy load on the power network and causes increased wear on internal electrical parts. Therefore the motor of the new KRANZLE device only switches off 30 seconds after closing the gun and then goes to stand still. By opening the gun, the device is started again.

Safety cut-out

If the device is accidentally not turned off after use or the pistol is not used for 20 minutes, the device automatically goes into the safety state via deactivating. By operating the main switch again, the device is activated again.

Replacements and inspection work should only be performed by qualified persons **when the machine is disconnected from the power supply, i.e. the plug pulled out from the electrical socket.**

Setting up

Location

Neither set up and operate the machine in rooms where there is a risk of fire or explosion nor put it into puddles. Do not use the machine under water. The device must not stand in the spray area of the high pressure jet.

CAUTION !

Never suck in liquid containing solvents such as paint thinners, petrol, oil or similar liquid matter. **Pay attention to the instructions of the manufacturers of the cleaning agents.** The seals in the machine are not resistant to solvents! The spray of solvents is inflammable, explosive and poisonous.

CAUTION !

When running your high pressure cleaner with hot water of 60° C raised temperatures occur. **Do not touch the machine without safety gloves!**

Description

Electrical connection

The machine is supplied with an electrical power cord with plug.

The mains plug must be fitted to a standard grounded socket with a **30mA** residual current operated device. The socket must be protected with a **16A delay** action fuse on the mains side.

KRÄNZLE quadro = 400 Volt / 50 Hz (phase-sequence not significant)

When using an extension cable, this must have a grounded lead which is properly connected to the socket. The conductors in the extension cable must have a minimum cross section of 1.5 mm². Plug connections must be of a spray-proof design and may not be located on a wet floor.

Description

Brake

Brake applied

Brake not applied

Brief operating instructions

1. Connect high pressure hose with spray gun.
2. Connect to suitable water supply.
3. Connect current - (400 Volt three-phase current)
4. Switch on machine and start cleaning.
5. After having completed the cleaning process, put main switch in zero position and by opening the gun, reduce the pressure in the high pressure hose.

Then, the high pressure hose can be rolled up

- Only use clean water ! Protect from frost !

CAUTION !

Please pay attention to the regulations of your waterworks company.

Because of the water tank, the device can be connected to any drinking water line without worries.

1. Turbokiller
Lance with nozzle protection and high pressure nozzle Flat jet 25°

2. Spray gun Starlet
with insulated grip and screw connection

3. KRÄNZLE - High pressure cleaners
quadro 800 TST, 1000 TST and quadro 1200 TST with hose drum
quadro 1000 TS and quadro 1200 TS without hose drum

4. Operating instructions

5. High pressure hose, 20 m NW 8
on hose drum

6. Crank for hose drum

7. Water inlet part
(filter is already installed)

How to assemble and furnish your high pressure cleaner

Remove the screw from the drive shaft of the hose drum. Unpack the crank and insert it onto the hexagon head. Tighten the crank again with the screw.

To check the oil level, loosen the oil cover screw and take out the oil dip stick. The oil level must be between the two markings.

To control the high pressure cleaner
put

1. the foot against the tilt bases and
then pull the device
2. towards you.

Preparation for use

1. Check oil level.

- There are two possibilities for checking the oil level of the pump:
- a) Oil must be visible in the viewing window
 - b) The oil state must be between the two markings on the oil measuring rod.

2. Connect the high pressure lance or Turbokiller to the spray gun.

3. Unroll hose without kinks and connect with handgun and pump. Use max. 20 m HP hose.

4. Connection of high pressure hose from device to lance

Preparation for use

- 5. The machine must be connected to the water line with cold water or up to 60° C warm water (see page 2).**

The hose cross section must be at least 3/4" = 16 mm (free passage). Filter 1 must always be clean.

Please make sure that the filter is clean before using your high pressure cleaner.

CAUTION !

When running your high pressure cleaner with hot water of 60° C raised temperatures occur.

Do not touch the pump without safety gloves!

External suction

If water is to be sucked from an external container for the high pressure cleaner, the connection hose between the high pressure pump and the water tank must be screwed off and the suction hose must be connected directly to the pump.

Make sure that the water is clean. Use the Kränzle suction hose with suction filter. (Order N°. 15.038 3)

**Maximum suction height 2.5 m, maximum water temperature for direct suction: 60°C
(see technical data on page 2)**

To shut down the pump

When using detergents:

Put chemistry sieve number 5 into the detergent container. Open the detergent valve, then the detergent is sucked in. When closing the detergent valve, the chemistry supply is automatically closed. Allow detergent to act and then wash off. (see page 5).

Note that you must always comply with the instructions provided by the manufacturer of the detergent (e.g. instructions concerning safety clothing) and the water protection regulations!

To shut down the pump:

1. Switch off the machine. Device switch to „0“ position.
2. Cut off the water supply.
3. Open the spray gun briefly until the pressure is released.
4. Apply the safety catch on the spray gun.
5. Remove the water hose and spray gun.
6. Pull the plug from the socket.
7. Winter: store the pump in rooms above 0°C.
8. Clean the water filter.

Safety notes

Frost protection

Normally after operation, there is still some water in the device. Thus, you must take special measures to protect the device from frost.

- Completely drain the device

For this purpose, separate the device from the water supply. Then, turn on the main switch and open the gun. Now, the pump presses the remaining water from the water tank and the pump. However, do not allow the device to operate without water for longer than one minute.

- Fill the device with antifreeze agent

If the device is not operated for longer periods, especially over the winter, you should pump an antifreeze agent through the device. For this purpose, fill the anti freeze agent into the water box and turn on the device. Wait with opened gun, until the agent comes from the nozzle.

However, the best way to protect the device from frost is to store it at a frost-free location.

As to the recoil -
see notice on page 2!

Apply the safety catch on the spray gun after each use, in order to prevent unintentional spraying!

This is prohibited !

Never direct the water jet at people or animals !

Do not damage the power cord or repair it incorrectly !

**Never pull the high pressure hose if it has formed kinks or "nooses"!
Never pull the hose over sharp edges !**

This is prohibited !

**Never allow children to use
the high pressure cleaner !**

**Never direct the water jet at the
machine itself !**

**Never direct the water jet at a
power socket !**

Additional accessories for ... *(on demand)*

Rotary scrubbing brush

Order No. 41.050 1

Drain and pipe cleaning hose

10 m - Order No. 41.058.1

15 m - Order No. 41.058

**Environmental, refuse disposal and water protection
regulations must be observed when using the accessories!**

Car cleaning, glass, caravan, boat etc.:
rotary washing brush with 40 cm extension
and ST 30 nipple M22 x 1.5

Cleaning pipes, channels and drains: pipe
cleaning hose with KN nozzle and ST 30
nipple M22 x 1.5

Cleaning cars and all smooth surfaces:
brush with ST 30 nipple M22 x 1.5

Rotary point sprayer for extreme soiling:
Turbokiller with 40 cm extension and ST 30
nipple M22 x 1.5

The nozzle is blocked!

- No water but the gauge shows full pressure !

Nozzle dirty or sticky!

- Pressure gauge does not show full pressure
- The high-pressure hose vibrates
- Water comes out in spurts.
- If you do not use the high-pressure cleaner for some time the valves can stick

Wiring diagram

Inspections

The machine must be inspected according to the "Guidelines for Liquid Spray Devices" at least once every 12 months by a qualified person, to ensure that continued safe operation is guaranteed.

The results of the inspection are to be recorded in writing.

This may be done in any form.

Accident prevention

The machine is designed for accidents to be impossible if used correctly.

The operator is to be notified of the risk of injury from hot machine parts and the high pressure water jet. The "Guidelines for Liquid Spray Devices" must be complied with. (see pages 16 and 17)

**Check the oil level at the oil dip stick prior to each use (see also page 11).
(Ensure horizontal position!)**

Oil change:

The first oil change should be carried out after approximately 50 operating hours, then every year or after 1000 operating hours. If the oil turns grey or white, you must certainly change the oil of your high pressure pump.

Open the oil discharge screw at the bottom of the device over a collection reservoir.

Put the machine into a horizontal position to drain the oil. The oil is to be caught in the reservoir and disposed of in an approved manner.

New Oil: 1,0 l -

Motor oil: 10/W60 SAE halfsynthetic oil

Inspection report

for KRÄNZLE - High Pressure Cleaners

**The high pressure cleaner must be inspected
by an expert every 12 months.**

Appliance No.:

Type of appliance:

The following must be checked:

1. Safety features

- a) Manometer
- b) Safety valve (pressure control)
- c) Operating pressure
- d) Cut out pressure (max. 10% above operating pressure)
- e) Low pressure with closed gun

2. General condition

- a) High pressure hose
- b) Cable, plug, switch (VDE)
- c) Spray gun, spray accessories.
- d) Motor
- e) Oil level

The information in the operating instructions are a part of the inspection

Result of inspection:	Date of inspection:	Faults rectified, Stamp and signature
<input type="text"/>	<input type="text"/>	<input type="text"/>

<input type="text"/>	<input type="text"/>	<input type="text"/>

Excerpt from the Guidelines for Liquid Spray Equipment (ZH 1/46) by the Central Office of the Professional Trade Association.

Inspection:

Liquid spray equipment should be inspected for safe operation by a qualified person whenever necessary, but no less than every 12 months. The maker's or supplier's instructions must be followed. The inspection intervals may be extended if the equipment is not in active use.

The results of inspections must be recorded in writing and presented to the respective authorities on demand. There is no set form for these records.

Guarantee

The guarantee is only valid for material and manufacturing errors.
Wearing does not fall within this guarantee.

The instructions in our operating manual must be complied with. The operating instructions form part of the guarantee. The Guarantee is void if other parts are used than genuine Kränzle accessory parts or genuine Kränzle spare parts.

For high-pressure cleaners sold to the user the guarantee period is 24 month.

For high-pressure cleaners sold for industrial use the guarantee period is 12 month. In the case of a guarantee please contact your dealer or authorized seller delivering accessories and your purchase receipt. You can find them in the internet under www.kraenzle.com.

The guarantee is also void if the machine is used with exceeding the temperature and speed limits, a voltage below the required rating, with less than the required amount of water or with dirty water. Pressure gauge, nozzle, valves, sleeves, high pressure hose and spray equipment are wear parts and are not covered by the warranty.

EC declaration of conformity

We hereby declare,
that the high-pressure models:

(techn. documentation available from):

Nominal flow:
